

PrimeDTV PHD Products Remote Code Quick Set Up

If pre-set remote code value is lost due to low remote control batteries or the batteries have been removed for some time, user can follow the simple procedures below to set up and store the PrimeDTV product remote code back to the **STB** device button (STB refers to **Set Top Box**).

1. Press and hold the **SET** button (approximately 3 seconds) until the red indicator light stays on, then release it.
2. Press and release the **STB** device button.
3. If using **PHD-VRX**, **PHD-8VX** or **PHD-208** product, please enter the 4-digit code, **8159**.
If using **PHD-205** or **PHD-205LE** product, please enter the 4-digit code, **8057**.
If using **PHD-HM5** product, please enter the 4-digit code, **8105**.
4. If the code entered is correct, the red indicator light will be off and the quick set up procedures are complete. Otherwise, the red indicator light will flash twice to indicate the code is invalid and red light remains on for prompting to re-enter the new code.
